General information

This Kit is part of the International Federation's Water and Sanitation Disaster Response.

Designed for the treatment and distribution of water for small populations, this kit can treat up to 75,000 litres of water a day for a population of up to 5,000 people.

This Kit requires the availability of local surface or ground water supply.

Limited sanitation capacity for a first response is supplied within the Kit, as well as some capacity for water trucking.

The Kit allows for the transport of treated water to several distribution points (capacity of up to 15,000 litres of water a day) with limited possibility of setting up different storage and distribution points (preconditions are the availability of flatbed trucks, fuel, and road access).

Material for conducting hygiene promotion

The Kit allows for limited vector control through indoor residual spraying
