**Stockholm World Water Week**

**PNS WASH Advisors Meeting**

***Session 2 Theme: RAMP for full Project Cycle  
Management***

***An Overview***

## *Developmental WASH: RAMP for full Project Cycle Management.*

- RAMP and mobile data collection no longer an innovation, but a tool to support responsive project management (cycle).
- Many National Societies already trained.
- Donors/partners expect us to be familiar with and use effectively this technology.
- Some donors now expect RAMP embedded in project design, costing and monitoring and evaluation.
- One RC Movement - Consolidation/streamlining required.

# Developmental WASH & RAMP – Needs & Challenges:

- *How can we ensure quality? (unbiased data collection, type of data collected, significance of results, and adequate/real time decision making)? Common approach?*
- *How can we further improve RAMP for Monitoring, Evaluation, and Reporting? How can we facilitate data analysis, data visualization and reporting?*
- *Can we agree to pull our resources in further development of the tool? And in what direction?*
- *How do we pool technical expertise/cadre of experienced users?*
- *Ethical data collection and management: what needs to be done?*
